

Canowindra is hosting a
Grazing Naturally Day
With Dick Richardson

A one day instructional Workshop

- Understanding ecological succession
- The effects of management changes on ecology
- The dynamics of grazing management
- Building soil depth and maturity with animals and plants
- Creating environmental change
- The tools of Grazing Naturally
- Intro to the Maia web based grazing platform
- Grazing planning with the Maia Grazing platform

Join us for an entertaining and instructional day on the basics and principles of Grazing Naturally. Current ecological issues will be analysed and interpreted from a natural perspective. Practical activities and applications are demonstrated as simple and viable solutions to address ecological decline in grazing agriculture within changing climatic and economic conditions.

Dick Richardson shares his grazing experience through training and consulting and uses the Maia Grazing program to provide support. Assisting graziers to make better management decisions with instant, real-time updates of current and projected feed and stock numbers.

- Digital planning and forecasting
- Planning for Open and Closed seasons without paper
- Stockflows & reconciliation
- Paddock, stock & rainfall analytics
- Production & margin analysis
